

4Farmers is the Best Value

4FARMERS is always the best value. If not for the lowest price then for the whole package 4Farmers provides.

We recently saw on a popular internet site prices of \$15/litre for **Propiconazole 250EC** and \$17/litre for **Tebuconazole 430SC** promoted as being great prices. Not when you compare them to 4Farmers!

If you do so much volume to qualify for a gimmick, and our savings weren't already enough, then we can beat that too. Working on a cost plus model with realistic margins we can usually beat any realistic offer.

"If you want the best deal on chemical simply pick up the phone and talk to 4Farmers", says new Sales Manager Cameron Williams. "With 4Farmers you can trust you will get a good price, high quality product produced locally by 4Farmers, free agronomic advice and you are supporting a company that has been lowering prices for farmers for over 15 years".

"For farmers not serviced by a local 4Farmers distributor simply call head office and we can give you a price delivered to your closest town and in some cases we can deliver on farm."

4Farmers Sales Manager Cameron Williams urges farmers everywhere to call 4Farmers for the best deal on farm chemicals.

Glyphosate Price Speculation

"ANY speculation of rising Glyphosate prices is just that," say 4Farmers General Manager Neil Mortimore.

"Glyphosate could rise going forward but the AUD would need to fall significantly and the active ingredient price to rise. Though possible, neither of those factors is certain".

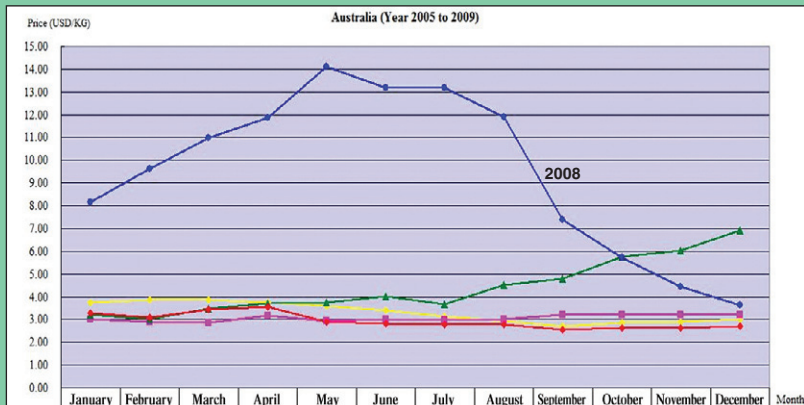

"Instead of speculating there are many people who could save a lot more on chemicals by purchasing more carefully and not buying certain more expensive branded products that maybe well over priced against their respective alternatives".

"People should not be spooked into buying Glyphosate now more than at any other time. Though certainly the price of Glyphosate is in the lower end of its typical price range and is reasonable buying."

"If people do feel more comfortable locking in Glyphosate pricing now then

they are unlikely to do better value than 4Farmers Glyphosate 470".

Glyphosate 95% Acid USD/kg Price of Exports from China to Australia

The current price of the technical grade active constituent is just under \$3/kg. A price shock like 2008 is not anticipated for some time.

Cheap High Quality Trifluralin Available

THE same website we saw spruiking fungicides specials was promoting \$4.50/litre for Trifluralin. If you think this is good, you're not looking very hard! It's very poor value when you consider you could instead buy quality locally manufactured 4Farmers product cheaper and with end of December payment terms. If you want best value it is always better to contact 4Farmers.

4Farmers Pty Ltd Suppliers of agricultural chemicals to protect your crops and animals.
