

Propyzamide Price Blitz

4FARMERS is launching a special price blitz on Propyzamide 500 with prices as low as \$19.95/L for liquid in 1000L containers. Product is also available in 200L, 110L 20L and as WDG 20kg boxes for not much more.

The next cheapest prices we know of is \$21.50/l and that's a wholesale price to resellers! If you want Propyzamide, it's unlikely you will buy cheaper and better quality than 4Farmers.

Order your requirements fast. The offer is for a limited time or until stocks run out.

4Farmers MD Phil Patterson says, "Propyzamide is a special 4Farmers product that we won't be beaten in".

4Farmers Propyzamide Rules

PROPYZAMIDE is a product synonymous with 4Farmers who pioneered the product starting in the late 90s with a US\$100k investment into manufacturing in China. 4Farmers also invested intellectual property with former 4Farmers employee Prof Johnson training the Chinese in critical processing steps to produce the Propyzamide.

4Farmers established an exclusive legal

contract with what still today is the only manufacture of Propyzamide in China and is the only legitimate generic source.

Don't buy or commit to any other brand other than 4Farmers Propyzamide or you are otherwise surely risk dealing with falsely registered product and risk yourself the implications of this.

If your buying Propyzamide, only trust buying 4Farmers Propyzamide.

Exciting Propyzamide Results

4FARMERS research the product demonstrates the exciting potential that Propyzamide may have as a tool in fighting resistant ryegrass.

Propyzamide is a group D chemical in a sub group separate to Trifluralin, and has been suggested to show good control on ryegrass resistant to all other chemicals.

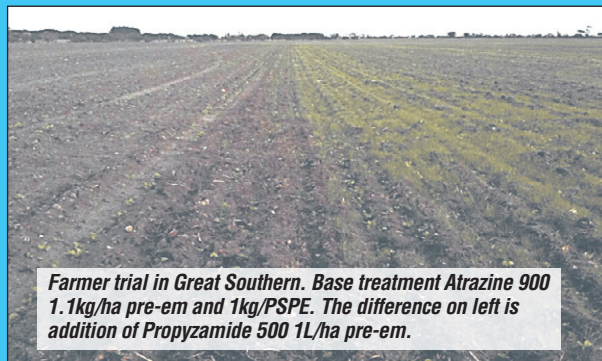

The photos alongside from a 4Farmers trial were from a sprayed 4/8/2010. Results show both 1kg/ha of Atrazine 900 and Propyzamide 500 each achieving good control but the residual value of Propyzamide was significantly greater.

Presently the product is only registered in broadacre situations for pastures and forage hay. Pre-emergent has been found generally better and perhaps mixed another pre-emergent Triazine. Like with many chemicals, activity of Propyzamide can be very dependent on good moisture conditions.

There has been significant interest in its potential use in canola or lupin crops. In trials crop safety appears good however grain residue data is incomplete.

If Propyzamide were registered in canola, and with cheap prices like it is now, then it would surely challenge the expensive canola alternatives reliant on spraying with Glyphosate.

RESULTS		
Treatment	16/09/10	25/10/10
1.0kg/ha Atrazine		
1.0kg/ha Propyzamide		
Control - no herbicide		

Farmer trial in Great Southern. Base treatment Atrazine 900 1.1kg/ha pre-em and 1kg/PSPE. The difference on left is addition of Propyzamide 500 1L/ha pre-em.
