

## Nufarm and Customs prop up higher chemical costs

**Farmers should be in uproar!!**

CHEMICAL costs are generally going to stay higher due to recent successful appeals by Nufarm and Customs in the Federal Court.

Dow recently won a case to repeal import tariffs on Trifluralin. Incredible but true Nufarm and Customs recently won a federal court appeal and successfully argued that Trifluralin is substitutable for 24D herbicides??!! Therefore it follows the case to support tariffs for 24D herbicides (which is also dubious) maybe equally applied to Trifluralin.

The outcome on this point of law has implications on how successfully 4Farmers can run its case to remove tariffs on Glyphosate which is also argued to be substitutable for phenoxy herbicides.

For that matter while the farcical argument that Glyphosate, Trifluralin and phenoxy chemicals are all substitutable it is unlikely any tariffs could be removed on any chemical.

Equally amazing is the lack of media and farm lobby group attention these decisions have attracted though the federal court appeal on Trifluralin was handed down over a month ago.

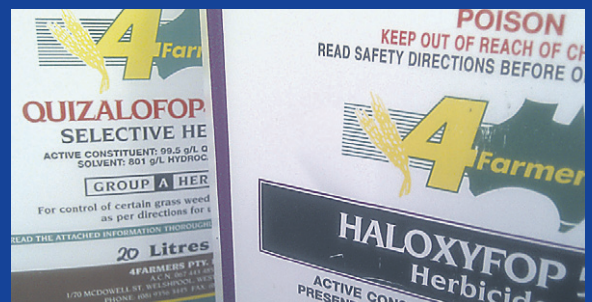

Nufarm could potentially argue all chemicals are substitutable because they are all weed killers and have all tariff concessions removed on all chemicals previously won. Will people take notice then?

Chemical tariffs cost cropping farmers around \$1/cropped ha. Though perhaps relatively small among some other taxes and problems confronting farmers they should none the less be incensed of the principle that these insidious costs exist.

Action that every farmer should be taking is firstly raising the matter with their local federal member and farm lobby group. After all chemical tariffs could be simply removed by government if they so wished.

Secondly, every farmer should avoid buying Nufarm products. Instead farmers should be supporting companies like 4Farmers that are fighting for farmers and exposing this sort of nonsense.

## 4Farmers Haloxyfop 520 the Superior Grass Killer

4FARMERS Haloxyfop 520 at the special price of approximately \$40/L and recommended rates of 50ml/ha costs only \$2/ha.

This rate not only gives good control of most grasses it also can control Erodium which can be a problem particularly in pastures.

At this special price the cost of Haloxyfop 520 is little different to QPE 100 which is also available from 4Farmers at sensational prices.

4Farmers have both products readily available.

Grass free legume crops and pastures have never been so cheap with 4Farmers.

## Propiconazole has advantages over Tebuconazole

PROPICONAZOLE 250 EC is better than Tebuconazole 430 SC in a couple of situations.

Firstly Barley Net Blotch, which is rampant in many barley crops, is controlled by Propiconazole whereas Tebuconazole does not. Therefore in barley Propiconazole is usually the preferred choice.

The other situation is if the fungicide is to be sprayed with EC herbicides it is better to mix it with an EC fungicide like Propiconazole which is going to be more compatible than an SC like Tebuconazole.

4Farmers has sensational prices on both fungicides and we challenge you to get cheaper products of high quality elsewhere.
