

Imidacloprid gives big yield increases

...ON CANOLA...

Imidacloprid dressed canola seed controlled insecticide resistant green peach aphid (GPA) and effectively suppressed spread of beet western yellow virus (BWYV) for 2.5 months in GRDC trials at Avondale and Badgingarra trials in 2002.

At each site the yield increase due to application of Imidacloprid seed dressing was 88% and 74% respectively.

...AND CEREALS...

Imidacloprid is also extremely effective in cereals to control a wide range of sucking and biting pests and is registered for the control of aphid feeding damage and management of barley yellow dwarf virus in cereals.

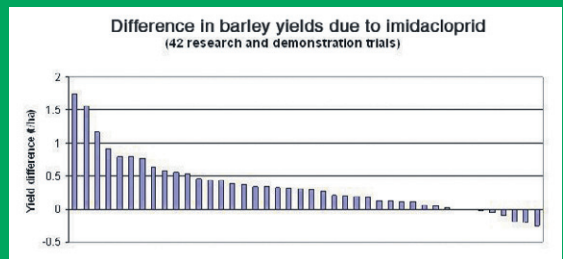

Being absorbed and translocated throughout the seedling also allows any beneficial species to attack pests with little or no effect from the

seed treatment insecticide.

One year of GRDC trials in 2009 in northern NSW on barley showed over all trials in a low aphid pressure season Imidacloprid 600g/l at low rates of 1.44L/1t seed resulted in a net economic benefit in 61% of comparisons with an average net gain of \$15/ha.

At higher rates of Imidacloprid 600g/l gave a positive return in 74% of cases and an average benefit of \$36/ha.

The economic benefit would be even greater with 4Farmers product that is a fraction of the price of that in the trial.

There have also been suggestions that Imidacloprid can help overcome environmental stress during establishment and can produce positive growth responses in the absence of any obvious pest pressure

NEW RELEASE

4Farmers Imidacloprid + Triadimenol

STOP PRESS – 4FARMERS has released new for this season a seed dressing that combines the great benefits of Imidacloprid with a traditional seed dressing like Triadimenol.

The Imidacloprid and Triadimenol product is similar to the product Zorro®.

4Farmers Imi+Triadimenol will add to the high quality range of other seed dressings 4Farmers has including Triadimenol 150C (flowable or dry) and Tebuconazole 25T.

Talk to 4Farmers if you want high quality and the most cost effective seed dressings available. Call 4Farmers now to secure your requirements
