

Propyzamide big interest

GROWERS wanting Propyzamide are urged to get orders in with 4Farmers now.

4Farmers has exclusive supply agreements with the only factory that was registered for production 18 months ago.

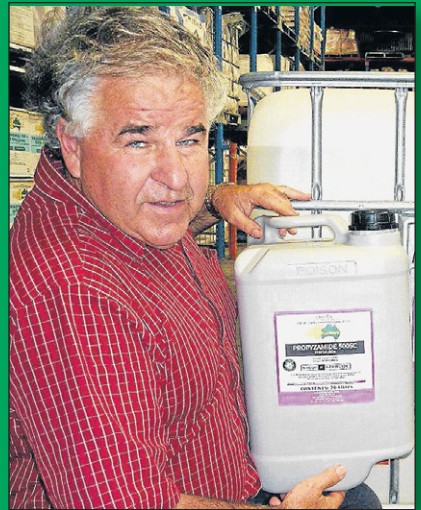

There are a couple more factories now producing it but it is uncertain how much they can supply.

Many customers who have used Propyzamide were very happy with its performance this last season and are ordering more. The word is many more farmers concerned with ryegrass resistance are keen to use it for the first time.

So with demand possible growing exponentially but supply maybe not increasing at the same rate it maybe a product that will be in tight supply come autumn.

4Farmers hopes to be the first to have Propyzamide registered in canola crops, maybe prior to seeding next year, and expand it from its only current broadacre registration in pastures.

As with most products the best quality and best prices are with 4Farmers so don't waste time shopping elsewhere.

4Farmers MD Phil Paterson urges farmers to place orders for Propyzamide now.

Insist it is 4Farmers seed dressing

IF YOU are you using seed dressing on your seed this season insist on 4Farmers product.

If we have the seed dressing you want it is almost certain to be cheaper with 4Farmers. And the product is top quality.

4Farmers traditional product Tebuconazole 25T (like Raxil®) costs as little as \$14/L and another like Triadimenol 150 (like Baytan®) cost not much more.

New products containing Imidacloprid, an insecticide to mainly control aphids and stop disease spreading in crops, have achieved massive yield increases in some crop trials and their price is just as sensational.

Imidacloprid 600 (like Gaucho®) is approximately \$25/l and is well proven in cereal and canola crops.

Imid-Triadimenol combines the benefit of the Imidacloprid with the proven performance of the traditional cereal seed dressing Triadimenol (like Baytan®). At around \$15/l it is approximately 50% of competitors.

If you aren't dressing your seed with anything the new Imidacloprid products will make you think twice especially at the prices they are.

4Farmers has incredible price on Imid-Triadimenol seed dressing increases cereal crop yields plus protection against bunts & smuts.

Esters outrageous

ARE you summer spraying using an Ester product? Is it 4Farmers? Maybe a shame if its not.

Ester has gone up but it appears more significantly for others than 4Farmers.

Ester 680 or 800, take your pick from 4Farmers. Ester 680 is good value but if you can use Ester 800 its even better value.

4Farmers are applying for a summer spraying permit for Ester 800.

4Farmers Ester 800 is one of the best value herbicides available.

4Farmers Pty Ltd Suppliers of agricultural chemicals to protect your crops.
