

# Plenty Fungicides available now at 4Farmers

“TALK of unprecedented demand for fungicides and shortages is so far nonsense and scare mongering”, says 4Farmers General Manager Neil Mortimore. “Certainly there is some disease about of course it could potentially develop into a big year for rust and other diseases.”

“However as far as suggesting there is a shortage of product is absolute rubbish. As many have found, if they want the truth about chemical prices and what’s really happening they’ll call 4Farmers

“It’s a strategy other suppliers will

sometimes use to pressure people into purchasing decisions because they generally can’t beat the value 4Farmers offers.”

At the present moment we have plenty of supply available of the three main cereal fungicides. Common usage and indicative costs are:

- Tebuconazole – Best bet for wheat diseases, typically 145ml/ha, \$3.75/ha.
- Propiconazole – Best bet for barley diseases, typical application 150ml/ha (500ml/ha for net blotch), \$2.75/ha.

*4Farmers has plenty of fungicides at present*

- Triadimefon – Good on Barley mildew and stripe rust at 500ml/ha, \$2.75/ha

## Don't miss 4Farmers at this years field days!

### See our Special Display - The Chemistry behind your Farm Chemicals

Ever wanted to know more about the chemistry behind your farm chemicals and how they're made. On display will be raw samples of chemicals prior to formulation, working displays of product QC, comparisons of good and bad batches of products and all sorts of interesting things related to your farm chemicals.

A chemist will be on hand to answer all your curly chemistry questions.

### Field Day Specials

Some of the incredible specials available at the field days are;

- |                                 |                  |
|---------------------------------|------------------|
| Cypermethrin ULV 40             | \$1/litre ex GST |
| Triflumuron Lousicide Backliner | \$150/20l ex GST |

Plus regular giveaways of **FREE CHEMICALS**

Clients of 4Farmers make sure you drop in and get your **SPECIAL FREE GIFT.**

Latest copy of 4Front – Intelligence about the farm chemical business

*Senior Chemist Keith D'Costa will have plenty to share at the field days.*

## Farmers missing out on millions of \$\$\$

Many farmers are still not controlling grasses in pastures. This is one of the most fundamental steps to assure better yields next year of perhaps 1t/ha or more.

In addition to this is the strife grasses cause sheep in pastures. There is no excuse for this now that controlling grasses with 4Farmers grass selectives is so cheap.

- 4Farmers QPE 100 is the base recommendation and at 250ml/ha costs less than \$3/ha.
- If geranium is a problem in the pasture use 4Farmers Haloxyfop 520 instead for not much more.
- Ryegrass can be controlled by Clethodim 240 although there is no registration in pasture. Farmers who might try this would use a mixture of say QPE 150ml/ha + Clethodim 150ml/ha.

Always use 0.5% Enhance with these grass sprays or similar quality mineral oil. And also consider adding 4Farmers Omethoate insecticide.

*Grass selectives applied now will give big returns next year.*
