

Clean pea crops with Cyanazine

AS more and more farmers started growing pulses, 4Farmers decided to revive Cyanazine, an old herbicide from the triazine family, and it is again demonstrating its versatility, especially when used as a pre-emergent treatment before sowing field peas and chickpeas.

One person who tried Cyanazine last season was Grass Patch farmer, Leon Bowman, who used it for the first time on a crop of field peas.

"It was very dry when we applied the Cyanazine" Leon explained, "in fact I wondered if it was too dry as we only had 70mm for the year until mid July.

"But it worked extremely well and we didn't even need to use any grass selectives post emergent.

"The season turned around after that" he added, "as we had another 370mm for the rest of the year, and that figure included a very dry August, with a hail storm effecting the peas before we could harvest them!"

Cyanazine can also be used with Faba beans, lentils and vetches and when applied pre-emergent, good soil moisture levels will produce best results.

It can also be applied post emergent, preferably to small weeds, but care should be taken to ensure that the crop and/or weeds are not under stress from frost, drought or water logging.

It will control most seedling weeds and does not need any adjuvants and when used pre-emergent, weeds will generally emerge and grow to 2-3 leaves before yellowing and dying, while as a post-emergent, weeds will die in 3-4 weeks.

"It worked extremely well and we didn't even need to use any grass selectives."

Order early, or you could miss out on your supplies

4Farmers has only limited supplies of Cyanazine as well as other important products, Triadimefon 500 Dry, Propyzamide and Two Up. Order this month to ensure supply in time for this season.

Only a week left to take advantage of the ANZAC specials from 4Farmers!

FARMERS holding off ordering Glyphosate and other pre emergent chemicals in case of price drops have no excuse to wait now.

4FARMERS has extended the ANZAC specials and they will now be available until February 26, giving clients a last chance to take advantage of this great opportunity.

Products included in this offer are Glyphosate 470, Trifluralin 480, Triallate 400, Atrazine 900 WDG, Simazine 900 WDG and Pendimethalin 330 and Two Up.

Under this deal the clients are invoiced the lower of the price when goods are ordered or picked up. On top of that there is a 2% discount off the lower price and payment is not due until April 25.

It's a great offer, but closing very soon!

Turn Two Up into a winner

4FARMERS has taken the guess work out of Two Up, a combination of Trifluralin and Oryzalin, which is pre-measured and pre-mixed, just a matter of adding water and it is ready to go.

Oryzalin is another chemical cousin to Trifluralin and is completely non-volatile, but because of the presence of Trifluralin in the mix, incorporation is still recommended.

This mix generally gives better control of silvergrass than Trifluralin alone.

4Farmers Pty Ltd Suppliers of agricultural chemicals to protect your crops and animals.
