

## 4Farmers FarmPro 700 – A surfactant and more

WHEREVER you're adding regular wetter to reduce surface tension of spray droplets and improve coverage, consider adding 4Farmers FarmPro700 to do the same thing and more.

4Farmers FarmPro 700 reduces pH, which is

beneficial to the activity of certain chemicals, particularly some insecticides that are otherwise unstable under alkaline conditions.

At rates above 0.25% by spray volume products like FarmPro 700 are known to disrupt the waxy leaf surface improving penetration of chemicals and improving rain fastness. FarmPro 700 could also assist translocation of certain herbicides inside the plant.

Another benefit of FarmPro 700 can be better droplet formation and less very large and very fine droplets.

☐ 4Farmers FarmPro 700 has more muscle than regular Surfactant

## Tax Time Deals – Big Savings

IF YOU have the fortunate problem of needing to manage your taxable income by bringing some expenditure forward then consider chemicals from 4Farmers

Purchasing chemicals can

be convenient for this situation because you can easily spend a large amount of money on products that don't take a lot of space. They are easily acquired and delivered to your property prior to June 30th.

Currently we have available on request very good deals on large quantities of Glyphosate and Trifluralin. Of course an alternative is bringing forward some purchasing of post emergences that you are certain to require.

☐ Talk to 4Farmers to purchase chemical and manage tax

# Handle Generic Omethoate with care

FARMERS should be well conversant of safe handling procedures for all farm chemicals particularly more dangerous S6 and S7 products that include insecticides such as Omethoate.

Farmers should be especially careful of any generic Omethoates, including 4Farmers. To date there is only two registered sources of active and the one we understand all generic product originates is less than ideal source because it contains various impurities that increase the health risk to the user.

The inferior source was one of those found to be registered using false data by Imtrade. It is disappointing that Imtrade and other generic companies might have known the Omethoate was

below APVMA specifications and at the expense of farmers' health. When purchasing the product these facts were unknown to 4Farmers. Since then we have worked with the APVMA and gained a permit for its safe use and sale.

4Farmers is open and honest with its clients and always strives to deliver quality products. We strongly encourage all safety equipment and measures be taken to prevent exposure to these chemicals.

4Farmers Omethorate 270 is well priced and used with proper care represents good value.

☐ 4Farmers Omethoate 270 is great value but must be handled safely like all dangerous chemicals
