

# Relief for tight budgets

THE feedback we hear is many people are facing tight budgets this year.

A simple way to help the budget is cut the expenditure. Chemicals are often the big item second only to fertilizer and are a good place to review and make a difference.

That's why many people are turning to 4Farmers. 4Farmers guarantees you will not find better overall value chemicals than ours.

So rather than read about how good 4Farmers is, start taking action. Give 4Farmers a call and get them to quote on your chemical requirements now.

4Farmers Trifluralin typifies 4Farmers whole range of chemicals - low price and high quality.

## Propyzamide surge in demand

THERE has been a surge of interest in Propyzamide with farmers searching for new products to beat herbicide resistance and clean out all their grasses particularly ryegrass.

The only broadacre registration for the product is in small seed crops however trials in canola and lupins used pre-emergent have shown some excellent potential.

An issue to date has been the high cost of Propyzamide. However 4Farmers has helped change that this year and at a cost of less than \$25/ha it has become a very affordable alternative.

It's available as a granule in 20kg boxes or as a liquid in sizes from 20L to 1000L.

Talk to 4Farmers now to secure your stocks.

*4Farmer general manager, Neil Mortimore believes proyzamide has exciting potential. Its available as granules in 20kg cartons or liquid in 20L to 1000L*

## Boxer Gold® Not Cost Effective?

WHY are so many throwing money at Boxer Gold when there might be a more cost effective alternative? Boxer Gold® is a good product, but like PowerMAX®, it is overpriced for the value it offers.

A good alternative 4Farmers would suggest is Trifluralin + Tri-allate + Metalachlor. The following calculation suggests an indicative cost of \$26/ha for a robust application of these products. What's Boxer Gold® \$30...\$35/ha??

Chemical	Indicative Cost \$/l	Possible Rate l/ha	Cost \$/ha
Trifluralin 480	\$4.50	1.5l/ha	\$ 6.75
Tri-allate 500	\$10.00	1.5l/ha	\$15.00
Metalachlor 720	\$6.50	0.65l/ha	\$ 4.25
			<b>\$26.00</b>

From a resistance perspective the above mix is quite effective. Tri-allate is from the same family of chemical as Prosulfocarb in Boxer Gold®. The other ingredient in Boxer Gold® S-metolachlor has the same mode of action as generic metolachlor.

So unless you've got money to blow carefully check if you can't use a more cost effective alternative.
