Use	Sunshade Spray Adjuvant is a petroleum (mineral) based oil product which provides the following qualities: - Wetting; assists spray droplet spread and adherence. - Penetrant; enhances chemical penetration of waxy and other hard to wet leaf surfaces. - Anti-evaporant; reduces aerial and leaf surface spray droplet evaporation.		
Compatibility	Most non-selective herbicides.		
Water Quality	Not affected by water quality.		
Situation	Purpose	Rate	Comments
Summer and Fallow Weed Control	Improves herbicide efficacy and reduces evaporation	150ml-1L/100L water	Use as recommended on herbicide label in conjunction with knock-down or non-selective herbicide. 4Farmers Sunshade Spray Adjuvant will enhance the uptake of the herbicide in to the plant by reducing the surface tension of the spray droplet.
Comments			
<p>Do not use Sunshade Spray Adjuvant for in-crop herbicide applications. This product contains aromatic components known to cause crop damage and reduce the selectivity of in-crop selective herbicides.</p> <p>Sunshade Spray Adjuvant will improve herbicide efficacy where weeds are under stress from dry and/or hot conditions, however reduced weed control may still occur due to plant physiological response to the conditions.</p> <p>The anti-evaporation properties of Sunshade Spray Adjuvant may allow spraying under conditions of high temperature and low humidity where off-target drift would otherwise be of concern.</p>
