

4Farmers Moonshine Glyphosate 970

Bill Crabtree
4Farmers Agronomist

We are excited to have a patent on **Moonshine** Glyphosate – an innovative tool to save you 20-30% on your glyphosate bill.

How is this possible? We're not joking.

Remember from high school chemistry: an Acid + Base = Salt + Water.

Current glyphosates are sold to you as a salt.

4Farmers has now got the acid option as Moonshine.

It sounds revolutionary – because it is!

Without compromising the efficacy, we can reduce the cost of Glyphosate significantly by excluding the 'base' from the formulation. The saving will vary from \$1-\$2/L (depending on market conditions) of a 450 gai/ha equivalent.

This is significant.

How do I use it?

1. Half fill your tank with water
2. Add 2% ammonium sulphate **first** – never change this order otherwise blockages can occur
3. Add Moonshine – one bag at a time
4. Add other products (eg triclopyr, Ester 800, metsulfuron)
5. Add 0.25% wetter

Farmers can buy 97% 4Farmers Glyphosate Moonshine in 10kg bags for ease of handling.
